

SKOTTRAB

PRODUCT CATALOGUE 2020

UNA SINTESI DI TRADIZIONE ED INNOVAZIONE TECNOLOGICA

SKI TRAB è nata dall' intuizione e dalla passione di **GIACOMO TRABUCCHI** che nel **1946** costruì i primi sci in legno massiccio. **SKI TRAB** ha la sede produttiva a Bormio, nota stazione turistica, terra di professionisti e campioni. Da allora il costante e naturale contatto con la gente della montagna, ha contribuito allo sviluppo di un prodotto vicino alle vere esigenze degli sciatori.

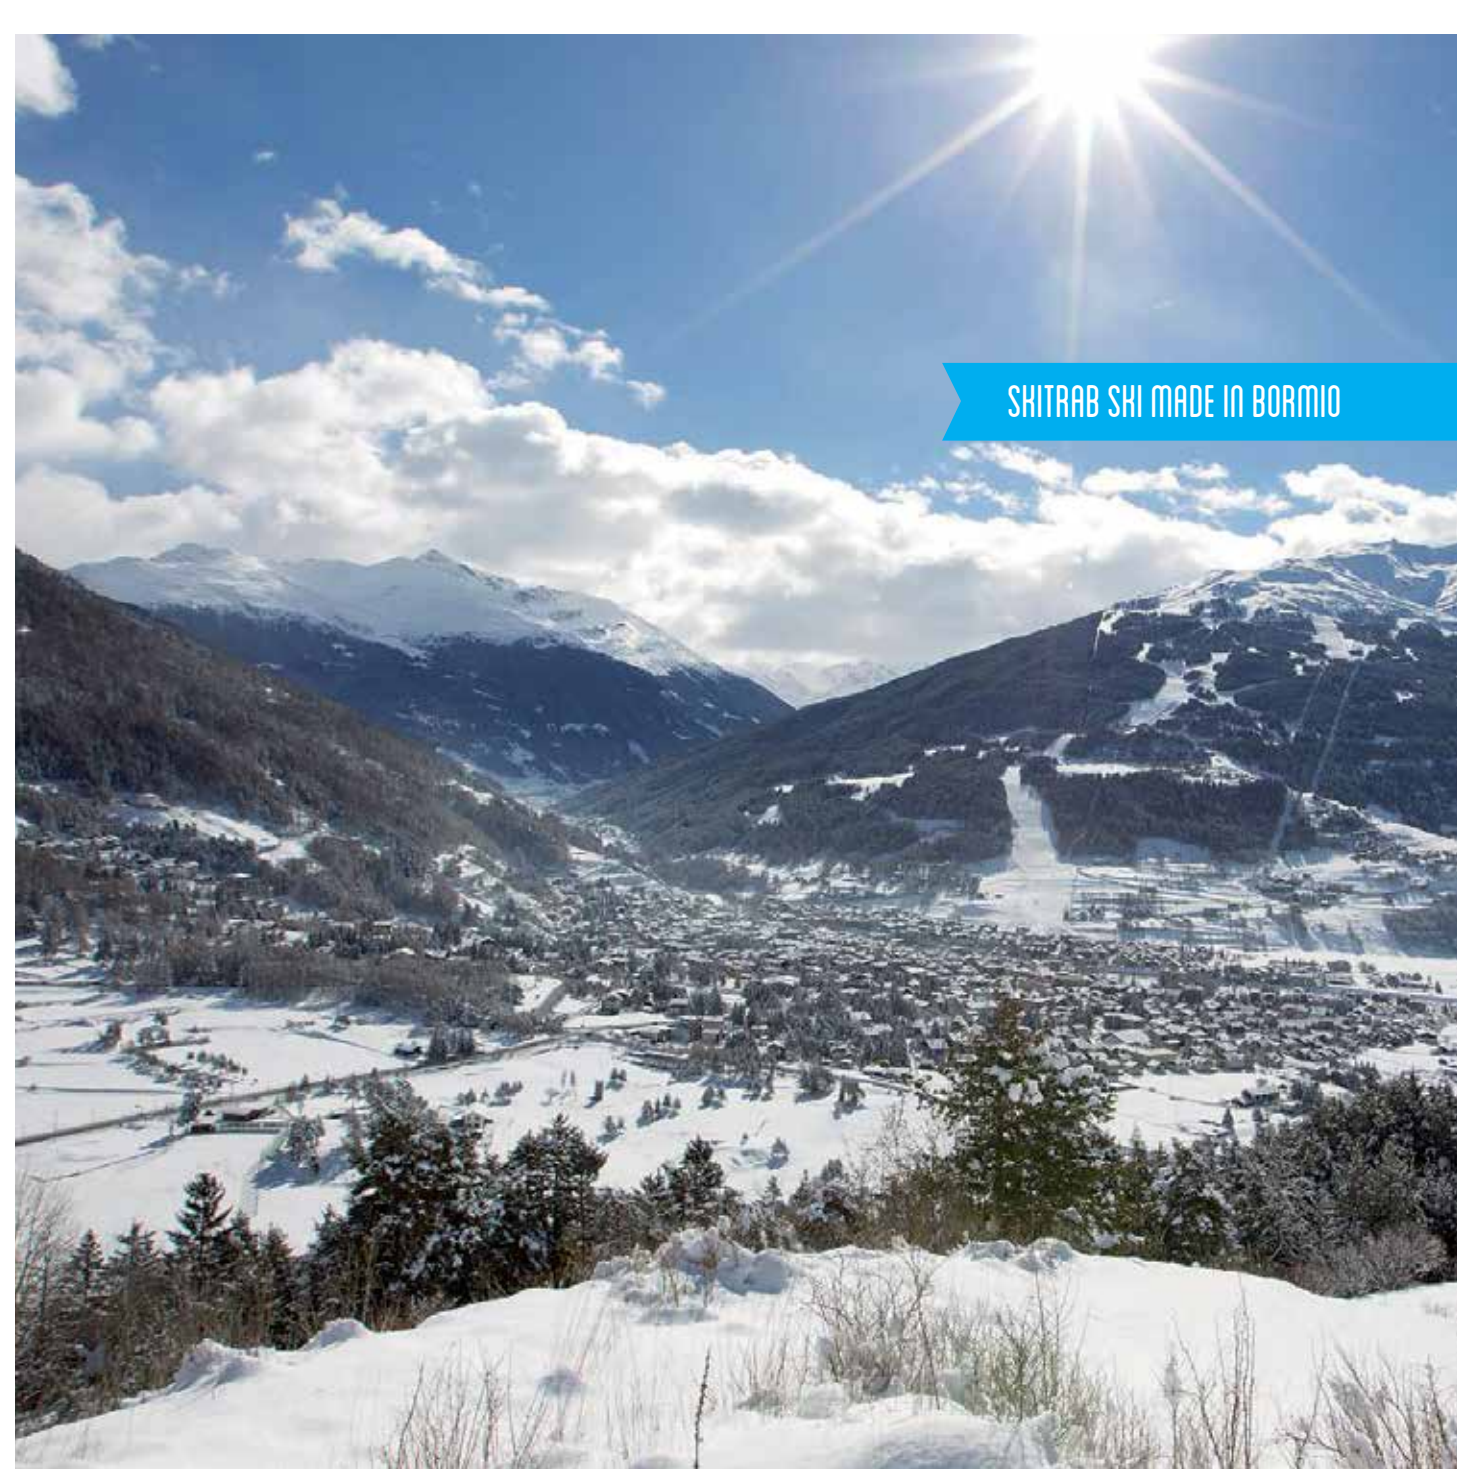

Bormio non è semplicemente il paese di montagna dove vengono prodotti gli sci **SKITRAB**.

"Made in Bormio" è un'affermazione che simbolizza un prodotto progettato, sviluppato e costruito da un'Azienda e da Persone che sono attivi esperti in materia di montagna, di scialpinismo e di sci di fondo. Tutti i prodotti **SKITRAB** si basano sull' esperienza, competenza e conoscenza accumulate in quasi 70 anni di sci, vita e lavoro sulla neve. Skitrab capisce lo sport, lo spirito e la cultura dello sci e lo vive ogni giorno. Vi invitiamo ad unirvi a noi nello scialpinismo e a condividere l'esperienza di sciare con i migliori sci del mondo.

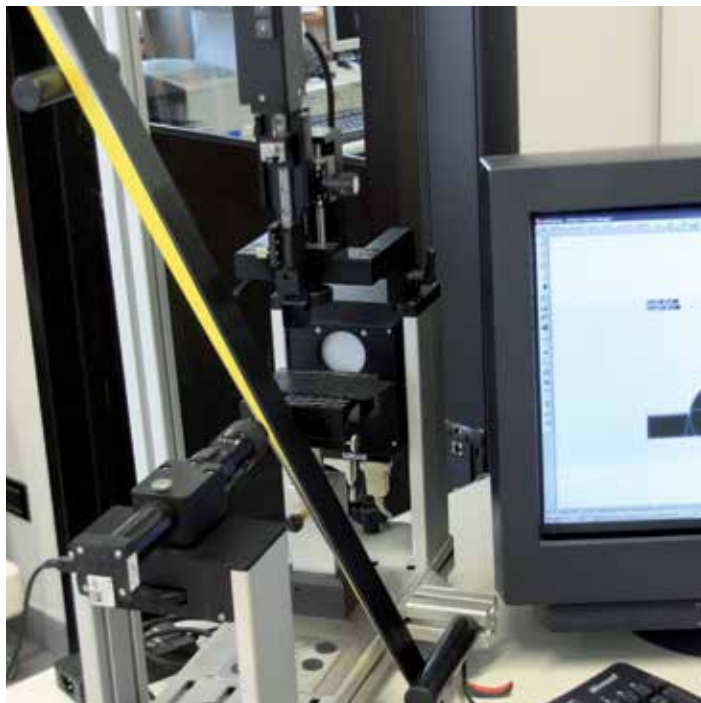

A MIX OF TRADITION AND INNOVATIVE TECHNOLOGY

SKI TRAB started up thanks to **GIACOMO TRABUCCHI'S** intuition and enthusiasm. Trabucchi made his first solid wooden skis in **1946**. The **SKI TRAB** factory is based in Bormio, a renowned skiing resort, boasting a tradition of professionals and champions given to the world of sport. Since its beginning there has always been a constant and natural contact with mountain experts.

Bormio it's not simply the mountain village in Italy where **SKITRAB** products are manufactured. "Made in Bormio" is a statement that symbolizes a product that was designed, developed and manufactured by a company and people that are active experts in big mountain, backcountry and Nordic skiing. All the skitrab products are based on experience, expertise and knowledge we have developed by quite 70 years of skiing, living and working in the snow. **SKITRAB** understands the sport, spirit and culture of skiing and we live it every day. We invite you to join us in the backcountry and to share the experience of skiing on the best skis in the world.

SKITRAB SKI MADE IN BORMIO

SKITRAB SKI MADE IN BORMIO

RICERCA

Lo sci viene progettato, costruito, analizzato e testato nella nostra sede di Bormio. Una sofisticata tecnologia per produrre gli sci prototipi e quindi testarli in laboratorio in ogni fase fisica e dinamica.

La nostra sfida maggiore è quella di ripensare lo sci arricchendo il suo codice genetico, dotandolo di innovative tecnologie perchè possa essere semplicemente migliore.

L'obiettivo non è solo la scorrevolezza.

La qualità di uno sci dipende anche dal suo modo di stare sulla neve, dalla stabilità e dalla capacità di adattarsi ai diversi terreni.

La tecnologia Scarabeo, l'anima alveolare in Aramide, i nuovi Flex ed i nuovi profili fanno sì che lo sci SKI TRAB abbia un'ottima qualità di costruzione strutturale che favorisce il lavoro specifico sulla scorrevolezza.

RESEARCH

SKI TRAB skis are designed, developed, manufactured and tested in our factory in Bormio. All ski prototypes and moulds are hand-made at SKI TRAB using advanced technology that allows immediate physical, structural and dynamic testing in our world class laboratory.

Our greatest challenge was to redesign the ski, enrich its genetic code, using innovative technology so it can be, simply, better.

Our aim is not only glide performance.

The quality of a ski also depends on the way it behaves on the snow,

its stability and ability to adapt to different terrain conditions. SKI TRAB's SCARABEO technology, the aramid honeycomb core and the new flex and profiles provide skis with an excellent structural construction which facilitates the specific work to improve gliding.

TECNOLOGIA IN COSTANTE EVOLUZIONE

La passione per l'innovazione e l'altissima qualità tecnica necessaria per la realizzazione dei nostri progetti rendono necessario un continuo e crescente aggiornamento tecnologico, sia a livello di macchinari impiegati in produzione che a livello di capacità esecutiva da parte del nostro staff.

Le fasi di finitura prima e di controllo della qualità poi necessitano di altrettanta attenzione e tecnologia nonchè di manodopera esperta.

Affidabilità e cura maniacale per i dettagli sono i fiori all'occhiello di SKI TRAB, una realtà dove artigianalità e alta tecnologia procedono di pari passo in una costante ricerca di miglioramento.

TECHNOLOGY IN CONSTANT EVOLUTION

Our Passion for innovation and the extremely high quality technology required to carry out our projects make it essential for us to stay ahead of the curve technologically, both in terms of the machines used during the production process and the execution capability of our staff.

The finishing and quality control phases also require just as much attention, technology and skilled manpower.

Reliability and an obsessive attention to detail are what set us apart; at SKI TRAB craftsmanship and cutting-edge technology move forward together in an unending search for improvement.

TEST E SVILUPPO

Il costante e naturale contatto con la gente della montagna, dove viviamo e lavoriamo, ha contribuito allo sviluppo di un prodotto sempre più vicino alle esigenze di chi scia. La ricerca tecnologica non avrebbe senso senza la continua evoluzione in atto, possibile solo grazie al supporto dei migliori professionisti della montagna. Così ogni nuova tecnologia nasce dall'idea ben precisa di migliorare la performance, il comfort, di implementare la resistenza ed il divertimento, anche nelle condizioni più difficili. Con noi collaborano infatti i migliori atleti, i professionisti, e tanti che come noi hanno fatto della sfida e del migliorarsi continuamente il loro obiettivo.

TEST & DEVELOPMENT

Constant contact with people from the mountains, where we live and work, has contributed to the development of a product which matches the demands of skiers. Technological research would be meaningless without constant evolution, only possible thanks to the support of the best mountain professionals. Every new technological breakthrough therefore stems from the clear objective of improving performance, comfort, resistance and fun, even in the most difficult conditions. The best athletes collaborate with us, as well as professionals and many more who like us are driven by new challenges and a constant desire to improve.

FINITURE

In primis la scelta della soletta in polietilene sinterizzato con aggiunta di additivi quali la grafite, il fluoro e altri composti della nanotecnologia. Quindi un assemblaggio a bassa temperatura per avere un'ottima planarità e non alterare la stabilità molecolare della soletta. Infine una lavorazione accurata con l'ausilio di macchinari ad alta tecnologia con molti passaggi e lavorazioni collaudate per garantire la massima scorrevolezza già dal primo uso.

FINISHING

First of all, the choice of a polyethylene sintered base with the addition of additives such as graphite, fluorine and other nanotechnology composites. Then a low-temperature assembling to obtain an excellent evenness and not modify the molecular stability of the base. Finally, a careful processing by means of high-technological machines using a variety of passages and tested processing to guarantee maximum glide from its first use.

CONTROLLO QUALITÀ

In SKI TRAB ogni sci è sottoposto ad un accurato e metodico processo di controllo qualità in grado di monitorare ogni singola fase di produzione. SKI TRAB ha dedicato molta attenzione alla formazione del personale e a sensibilizzare gli addetti alla qualità del prodotto. Massima attenzione viene dedicata ad ogni singolo sci. Le aste vengono singolarmente siglate dal team in ogni fase produttiva per garantire un controllo dettagliato.

QUALITY ASSURANCE

At SKI TRAB each ski undergoes a detailed and systematic quality assurance process that monitors quality through each individual phase of production. SKI TRAB has taken great care in training its staff in the methods and understanding of quality assurance and how important it is to build quality into every aspect of our skis. Every SKI TRAB ski is built with pride and attention to detail and is individually initialled by the team that built it.

GLIDING TECHNOLOGY

TECNOLOGIA DEL VELOCE

La scorrevolezza è per la Ski Trab come per il fondista il principale obiettivo.

Nello stabilimento di Bormio è stato messo a punto un processo produttivo dove ogni dettaglio è finalizzato a migliorare la scorrevolezza dello sci.

La fase di assemblaggio viene effettuata a bassa temperatura in modo da non alterare le caratteristiche dei materiali, quindi le dettagliate fasi di finitura vengono effettuate con tecniche in grado di mantenere le perfette qualità di origine della soletta.

Per soddisfare le diverse esigenze vengono proposti sci Cold e Plus con profili, sciancrature, solette e finiture adeguate alla neve fredda o meno.

GLIDING TECHNOLOGY

Ease of glide is as important to Ski Trab as it is for the cross-country skier.

At our factory in Bormio, a production process has been developed where every detail is finished with this in mind. The assembly phase is carried out at a low temperature in order to preserve the characteristics of the materials, so the detailed finishing touches are added using techniques which perfectly preserve the original quality of the base.

In order to satisfy a variety of needs, there are two different types of ski available: Cold and Plus, with profile, side-cut, base and finish ideal for either cold or warmer snow conditions.

GLIDING TECH

TECHNOLOGIES TO IMPROVE GLIDING

ARAMYD HONEYCOMB CORE

TECNOLOGIA ARAMIDE

L'Aramide è una tra le più importanti fibre sintetiche. E' usata nella tecnologia aerospaziale e militare per le incredibili caratteristiche di resistenza.

L'anima alveolare in Aramide rappresenta il miglior rapporto forza/leggerezza oggi sul mercato, SKI TRAB ha scelto il miglior materiale per mantenere alte nel tempo la stabilità, la performance e la durabilità dello sci.

ARAMID TECHNOLOGY

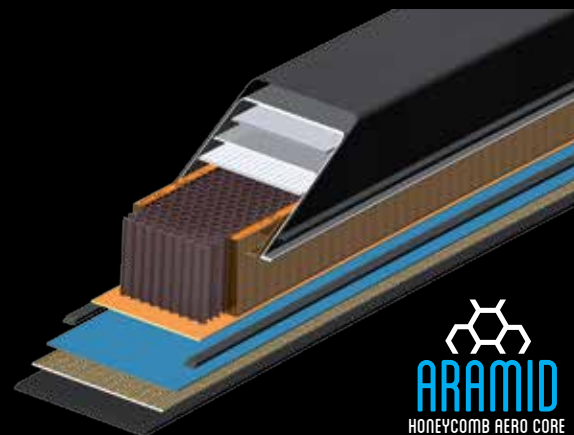

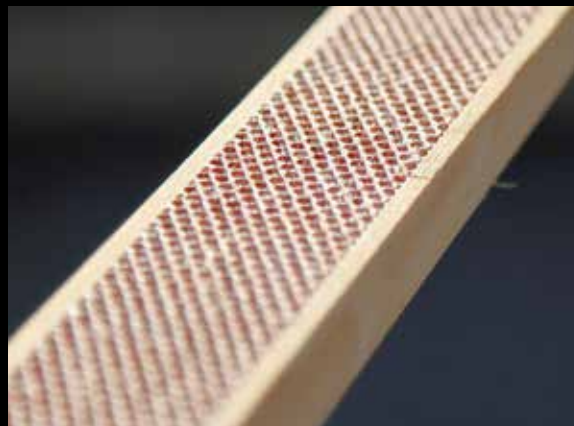

Aramid is among the most important synthetic fibres. It is used in aerospace and military applications due to its incredible resistance features. The Aramid-honeycomb compound core represents the best strength/lightweight ratio available today on the market.

SKI TRAB has chosen the best material to obtain long-term high stability, performance and durability of the skis.

THE ARAMID-HONEYCOMB COMPOUND CORE

(ARAMID, LIGHT WOOD, ASH)

REPRESENTS THE BEST STRENGTH/LIGHTWEIGHT RATIO AVAILABLE TODAY ON THE MARKET.

LIWOOD CORE COMPONENTS

LIWOOD CORE

LIWOOD CORE

Leggerezza e qualità alla portata di tutti: una nuova anima in legno leggero accoppiata con un fianco in legno più resistente e quindi avvolta in un box in fibra di vetro.

Lo sci rimane leggero e performante migliorando durata e resistenza. Il legno è la materia prima più usata negli sci. Da anni si è alla ricerca del legno leggero ma allo stesso tempo lo si vorrebbe duraturo e forte. Si va contro natura. L'anima in legno leggero deve essere supportata da lavorazioni e accoppiamenti con altri legni per migliorare la forza e soprattutto aiutata da materiali in composito che avvolgendola danno rigidità torsionale e durabilità.

LIWOOD CORE

Lightweight and quality within everyone's reach.

A new light wood core reinforced with a fiberglass box wrapping around the skis provides light and high performance skis with durability and resistance. Wood is the most used raw material in ski production. For years designers have sought after a wood that is lightweight yet durable and strong, yet this goes against nature.

A lightweight wood core needs to be supported by production processes and to be mixed with other types of wood to improve its strength; above all it must be wrapped by composite materials which give it torsional rigidity and durability.

DUO SKINS

DUO SKINS

Si tratta di una tecnologia che integra la pelle di foca con lo sci da fondo per evitare sciogliture.

Le pelli sono sagomate in due strisce aerodinamiche per aumentarne la scorrevolezza e inserite nella soletta e nella struttura stessa dello sci per rimanere esattamente complanari con la base dello stesso.

Si crea così un piano di scorrimento perfetto.

E' possibile intercambiare pelli di diverso spessore e scorrevolezza o reinserire la soletta.

DUO SKINS

It is a technology that integrates a mohair skin in the kick zone of the x-country skis to avoid waxing.

The mohair skins are shaped in two aerodynamic strips for an enhanced gliding and inserted in the base and in the ski structure itself in order to be precisely coplanar with the ski base, providing in this way a perfect gliding plane.

It is possible to replace the mohair inserts of different thickness and gliding performance or reposition the base.

DUO SKINS

NO WAX - SKINS TECHNOLOGY

SCARABEO TECH

SCARABEO TECH

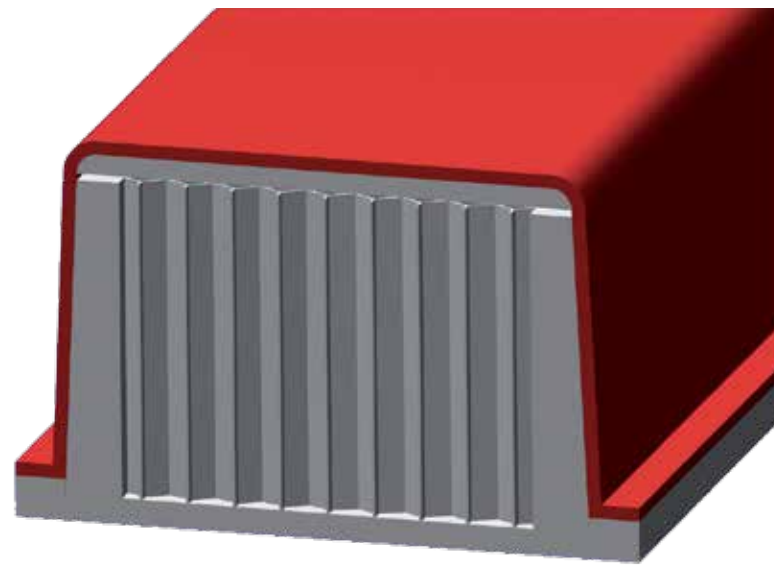

Un profilo dello sci che evidenzia due "zampette laterali" costruite per dare forza e durabilità allo spigolo dello sci oltre che a rinforzare torsionalmente l'asta.

Molto utile anche perché permette di rifare lo spigolo dello sci senza incidere la struttura.

SCARABEO TECH

A ski profile highlighting two "lateral little legs" to make the ski edge stronger and more durable besides strengthening the ski in torsion.

This is very useful also because it permits to reground the edge without affecting the finishing.

RACING FLEX

RACING FLEX

Ogni sci viene misurato e controllato con apparecchiature digitali che determinano la sua "carta d'identità".

Lo sci skate R3 è particolarmente stabile e preciso, la variante R5 molto maneggevole e performante in salita. Nel classico si distinguono il profilo lungo PR8 e quello corto particolarmente deformabile PR10. Per le misure corte l'intermedio PR4.

RACING FLEX

Each single ski is measured and checked by means of digital equipment that defines its "identification card".

The R3 skate skis are particularly stable and precise, the R5 variation is an easy turning ski and performs excellently during the ascent. The long PR8 profile as well as the short, specially deformable PR10 profile stand out in the classic technique. For short lengths the intermediate PR4.

DUO GRIP

DUO GRIP

Si tratta di una sintesi di due tecnologie allo scopo di ottenere un risultato ancora migliore. Alle estremità della parte centrale dello sci la Zero base, al centro la squama fresata che garantisce con il suo angolo inciso un'ottima tenuta.

Tutto questo esalta la scorrevolezza senza pregiudicare la tenuta in alcun modo. La squama resta corta, in posizione avanzata e non influisce sulla scorrevolezza e sul passo. La suola zero conferisce un ulteriore grip finale a tutto vantaggio del gesto tecnico, mai così preciso ed efficace.

ZERO BASE

DUO GRIP

Based on the combination of two technologies to achieve even better results. The Zero base at the ends of the central part of the ski, the milled fish-scale pattern at the centre which guarantees an excellent edge grip with its cut-in angle.

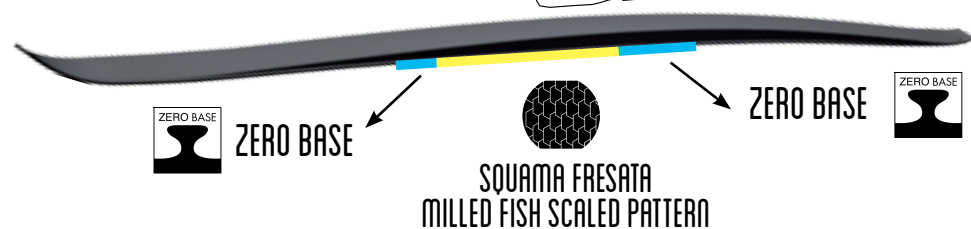

All this enhances its gliding performance without in any way compromising the edge grip. The short fish scale is shifted forward without affecting the gliding performance and the stride.

The Zero base provides an additional final grip to the benefit of the technical stride being more accurate and effective than ever before.

SQUAMA FRESATA
MILLED FISH SCALED PATTERN

CRITICAL AREA

DOUBLE POLING

DOUBLE POLING

L'evoluzione della tecnica double poling ha portato allo sviluppo di uno sci specifico. Scorrevolezza e risposta durante la spinta con le braccia necessitano di un arco adeguato e di una misura specifica.

Lo sci si caratterizza per un ponte meno arcuato ma con maggior sostegno, utile in fase di spinta. Finiture e attenzioni sulla scelta e lavorazione soletta come nel meglio della tecnologia ed esperienza skitrab in fatto di scorrevolezza.

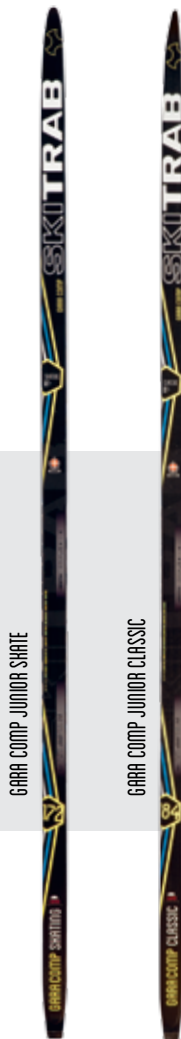

DOUBLE POLING

The evolution of the double poling technique has led to the development of a specific ski. Glide and response while pushing down on the poles require an adequate camber and a specific measurement.

The ski is characterised by a camber with less arch but more support, useful in the push phase. The quality of the finish and the choice and grinding of the base using the best that Ski Trab experience and technology has to offer provides excellent glide.

GARA AERO SHIS

GARA COMP JUNIOR SHIS

TEAM COMP SHIS

DUO SHIN SHIS

DUO GRIP SHIS

GARA AERO SKIS

La linea aero rappresenta la scelta più evoluta in termini di performance, leggerezza e velocità. Vengono usate le migliori tecnologie e attenzioni, l'anima è leggerissima in Aramide alveolare. Le finiture e le solette sono lavorate e trattate come quelle degli atleti di Coppa del Mondo. Ogni sci viene fornito con le misure del suo flex.

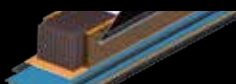

The AERO line is our state-of-the-art model in terms of performance, lightweight and gliding. The best technologies and attention are used here, the aramid honeycomb core is extremely light in weight. The finishing and the base are processed and treated in the same way as the ones for World Cup athletes. Every ski is provided with the size of its flex.

DUO SKIN SKIS

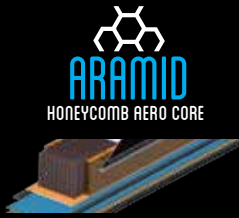

L'esperienza e la tradizione dello scialpinismo e dello sci da fondo sono integrate nella linea di sci da fondo con le pelli.

Ski Trab ha sviluppato un sistema di tenuta su due strisce di pelli incassate nella struttura dello sci per offrire tenuta e scorrevolezza in base alle diverse esigenze.

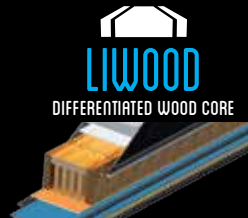

Dal modello Gara Aero con caratteristiche che permettono performance vincenti nelle competizioni a sci turistici che offrono un ottimo grip abbinato sempre ad un'ottima sensazione di sciata.

The experience and tradition of ski touring and cross-country skiing are combined in this line of cross-country skis with skins. Ski Trab has developed a grip system on two strips of skin embedded in the structure of the ski to offer both grip and glide depending on the various needs of the skier.

From the Race Aero model with features that equal winning race performance to recreational skis that offer excellent grip together as ever with a sensation of fluidity when skiing.

DUO GRIP SKIS

Ski Trab ha pensato anche agli sciatori amatoriali fornendo uno sci leggero, facile da manovrare con un'anima in legno ed un ponte strutturato per favorire il passo alternato ed i primi passi skate. La soletta sinterizzata garantisce una buona scorrevolezza e durabilità.

Ski Trab has also taken into consideration recreational skiers producing a lightweight, easy handling ski with a wooden core and a camber with a finishing to facilitate the alternate stride and the first skating steps. The sintered base guarantees a good gliding and durability.

POLES - BASTONI

POLES

Da alcuni anni la Ski Trab propone dei particolari bastoni da scialpinismo e da sci da fondo. L'esigenza di leggerezza e la sicurezza dello scialpinista sono lo spirito con cui sono stati progettati: materiale leggero e resistente, manopole anatomiche, papere innovative e funzionali e sistemi di allungamento sicuri e pratici.

For some years Ski Trab has been offering some special ski mountaineering and X-country ski poles. Our poles have been designed combining both the need for lightweight and the touring-skier's safety: light and resistant material, anatomic handles, innovative and functional baskets, safety and practical adjustment systems.

AERO LAMP

COD. 33020

Lampada a led compatta e leggera, perfetta per lo sci alpinismo, dotata di 2000 lumen.

La lampada emette un fascio di luce potente che permette di sciare con un'ottima visibilità.

Sopra la lampada è presente il pulsante di accensione e scelta della modalità di funzionamento: 4 livelli di luminosità (max luminosità – 75% di luminosità – 50% di luminosità - luminosità ridotta) e spenta.

Lo stesso pulsante ha quattro led che indicano lo stato di carica delle celle così da indicare l'autonomia delle batterie.

Progettata per resistere nelle condizioni più estreme di utilizzo

Lightweight, compact 2000 lumen led light, perfect for ski touring.

The lamp emits a powerful beam of light that lets you ski with excellent visibility.

The power switch is above the lamp and you can choose from 4 levels of brightness, (maximum, 75%, 50%, reduced) and off.

The same button has 4 leds that indicate the current charge, so you can tell how much battery life there is remaining. Designed to withstand the most extreme conditions.

Lycra, Meryl, cordura stretch, ykk zip

CLOTHES

SOCKS ALPIH

COD. 84154 long- COD. 84155 short

Calza in fine Merino-seta e Polipropilene.

La costruzione in maglia rasata ed elasticizzata sul gambale e piede ne favorisce la massima precisione di calzata e un anti-rollio dinamico.

Le parti del piede di maggior contatto e frizione come, punta, tallone, collo del piede e tendine d'achille sono realizzate in morbida spugna di Merino e Polipropilene che garantiscono massimo confort, buona azione anti-vesciche e favoriscono un microclima ideale per il benessere generale.

Leggera, resistente e grazie al accoppiata della lana Merino con il Polipropilene, è molto coibente traspirante e facile da lavare a 30° come tutti i capi tecnici.

Sock in fine merino-silk and polypropylene blend.

The knit, elasticised in the leg and foot, offers a precise fit that doesn't roll down. The parts of the foot with the most contact and friction like the toes, heel, instep and Achilles tendon are made in a soft merino and polypropylene blend that guarantee maximum comfort, protection from blisters and favour the ideal microclimate for overall health.

Lightweight, resistant and thanks to the merino-polypropylene blend, insulating, breathable and easy to wash at 30° like all technical sportswear.

Material: Merino-silk, Polypropylene

SIZE: 35-37 - 38-42 - 41-43 - 44-46
